## IT Classes for the over 50's - April to June 2011

The computer classes have been going well since we started again after the Easter holidays.

We have covered topics like Microsoft word, emailing, setting up email addresses, online shopping, downloading music and pictures, saving pictures and creating files, ordering pictures online after uploading their photos to certain websites, burning a CD and DVD, which they were all really interested in doing. As they all have so many questions it is hard to keep the classes to the allotted time and most of the time they run over.

Tracey, who runs these classes, has built up good friendships with the people who attend and their confidence has grown over the months with members all going home now and trying new things they have learned. She also has to spend some time fixing some of their laptops which some of them bring to the as they had done certain things to their laptops and they just didn't work properly.
